

AMENDMENTS TO THE SPECIFICATION

Please replace the Abstract of the Disclosure on page 67 with the following amended

Abstract of the Disclosure.

A resin sheet ~~which has a base layer containing dispersed particles dispersed therein, which is thin, and lightweight, and has excellent mechanical strength and light-diffusing properties.~~ The resin sheets may be used in liquid crystal displays.; A resin sheet having a hard coat layer, an epoxy resin layer containing 100 parts by weight of the resin to 200 parts by weight of a diffuser having a refractive index different from that of the epoxy resin and having an average particle diameter from 0.2 to 100 μm , and a thin metal layer as a reflecting layer, wherein the diffuser localizes so as to have a concentration distribution in the direction of the thickness of the epoxy resin layer. ~~a~~ A resin sheet containing having dispersed particles which is obtained by superposing a reflecting layer, or an inorganic gas barrier layer, or a color filter layer thereon. ~~on that resin sheet; a resin sheet containing dispersed particles which is obtained by superposing a color filter layer on that resin sheet;~~ processes A process for producing the resin sheet having a color filter layer, and liquid crystal displays employing those resin sheets. One of those resin sheets has a hard coat layer, an epoxy resin layer containing, per 100 parts by weight of the resin, up to 200 parts by weight of a diffuser having a refractive index different from that of the epoxy resin and having an average particle diameter of from 0.2 to 100 μm , and a thin metal layer as a reflecting layer, wherein the diffuser localizes so as to have a concentration distribution in the direction of the thickness of the epoxy resin layer.
